To Whom it May Concern~

I am a satellite radio customer who has enhanced safety and security due to XM instant traffic and weather. Please do not restrict the Satellite Providers ability to provide citizens with specific pay per listen content. The data provided is constant and on demand. When is competition, and natural market forces improving services for the consumer bad? I pay to receive this data and urge you to oppose HR 04-160. I do NOT think the interest of hedge corporations is more important than my safety on the road and at home. Again I Urge you to oppose this limiting of Freedom to broadcast helpful data. Especially in this time of increased energy prices. The impact realtime traffic reports and weather can impact use of fuel and enhance safety and help stimulate the economy. OPPOSE HR 04-160.
